

## Double Strike

The "Double Strike" is a 46-ft custom-built sport fishing boat that was designed and built by a fisherman. She sports a 15-ft beam, and has a 4-ft draft. The hull was built on a jig using kauri wood, then fibre glassed on both sides.

She's powered by twin 3208 Caterpillar diesels de-rated to 210hp each. She carries 1,500 litres of fuel, and 700 litres of fresh water. She cruises comfortably at 15 knots, with a top speed of 20 knots.

She's equipped with the latest technology in electronics, including radar, fish-finder, G.P.S., 600-fathom depth sounder, auto-pilot, hi-seas radio, V.H.F. radio, as well as flying bridge and cockpit controls. 240 volt power is available onboard..

The main saloon and sleeping quarters can comfortably accommodate 4 anglers on extended overnight charters. The spacious cockpit and lounge areas allow plenty of room for 6 anglers on day trips. The innovative split-level design forward of the huge cockpit gives anglers an under-cover, comfortable viewing lounge where they can relax and still be only seconds away from the rods when a fish strikes. The

"Double Strike" has been fitted with a head that surpasses any other, because if nature should call while out fishing, you can still see the lures through a large window in the door, and another window on the starboard side offers a panoramic view of the ocean, while still giving you sufficient privacy. An extra large door has been installed into the transom to enable big fish to be boarded with ease. A large freezer is located in the cockpit, along with a spacious refrigerated "day-box".

Two large live-bait tanks have been built into the cockpit floor, as well as a set of 2 tuna tubes built into the covering board on both the port and starboard sides.

There are no protrusions in the cockpit,

for all cleats are situated under the covering board and she is fitted with Panama fairleads. The super-strong fighting chair is crafted from stainless steel, and has a fully adjustable footrest and back. The 30-ft long fibreglass outriggers are mounted onto stainless steel bases.

This professionally built vessel meets the requirements of the New Zealand Maritime Surveys Act, and is fully equipped.
